JAS EZ ELBOW DEVICE

EXTENSION / FLEXION FITTING INSTRUCTIONS

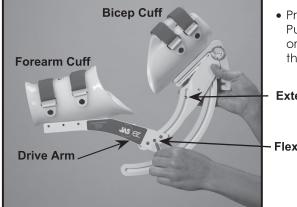

JAS ELBOW DEVICE

FITTING INSTRUCTIONS

It is best to carry out your JAS therapy session in a seated and relaxed position. The base of the device can rest comfortably on your lap or to your side.

DO NOT STAND OR WALK WHILE WEARING DEVICE

STEP 1: INITIAL EXTENSION / FLEXION PIN PLACEMENT

• Prior to each JAS session, remove Pull-pin, slide drive arm to extension or flexion hole setting, and replace the pin.

Extension

Flexion

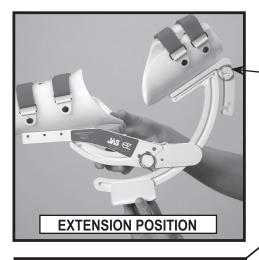

EXTENSION

FLEXION

STEP 2: POSITION WEDGE FOR EXTENSION / FLEXION USE

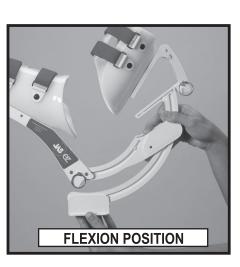

• Prior to each JAS session make sure wedge is in correct position (either extension or flexion).

_ Pull-pin

• To change wedge position from extension to flexion, remove Pull-pin and separate Wedge/Bicep Cuff component from device.

Wedge/Bicep Cuff Component

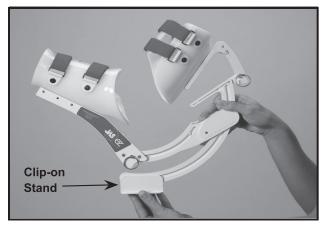

- Re-attach Wedge/Bicep Cuff component by inserting lower groove onto guide pins on device.
- Reinsert Pull-pin.

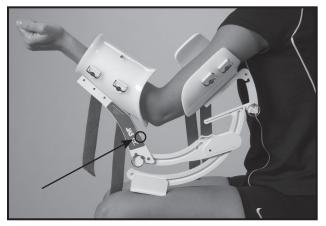

STEP 3: PLACE ARM IN DEVICE & ADJUST TO START POSITION FOR JAS SESSION

• Attach Clip-on Stand to base. Rest stand on knee or table for stability while fitting device.

- Place arm in device. Therapy Knob should be on the inner side.
- Rotate Therapy Knob to adjust device angle until it matches your comfortable end range of motion.
- Align tip of elbow over fulcrum marker (see arrow), so there is no gapping between forearm and Forearm Cuff.

NOTE: Forearm position (palm up or down) is optional. Choose position of comfort.

STEP 4: SECURE BICEP CUFF STRAPS

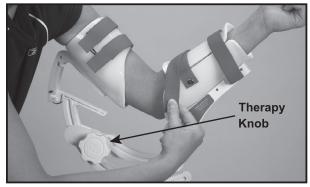

• Feed straps through d-rings on Bicep Cuff and secure so cuff fits comfortably snug.

STEP 5: ADJUST POSITION OF FOREARM CUFF & SECURE STRAPS

• Loosen knob under Forearm Cuff, and slide cuff inward for extension, outward for flexion. Retighten knob.

- Secure straps on Forearm Cuff comfortably snug.
- Remove Clip-on Stand.
- Begin treatment by rotating Therapy Knob as outlined on the JAS Exemplary Treatment Protocol.

IMPORTANT FOR FLEXION USE

When working in flexion beyond 95°, bunching in the Bicep Cuff or colliding of both cuffs may occur, preventing further flexion. To remedy:

- If using for Flexion only: Trim off front portion of Bicep Cuff.
- If using for both Extension & Flexion: Loosen straps on Bicep Cuff and move cuff out of the way during flexion sessions.

Remove the JAS EZ device if you experience pain at any time and contact your Joint Active Systems sales consultant.

JAS EZ Turnbuckle orthoses are custom fabricated per individual patient. A series of specific measurements are taken so that the rigid polyethylene cuffs can be molded and cut to precisely fit the unique anatomic dimensions and anomalies of a patient's extremity. This is the only way to assure accurate fit and minimize potential for tissue irritation.

JAS EZ Turnbuckle orthoses can be prescribed by the practitioner in a variety of wearing protocols and applications. JAS EZ orthoses can be used as a Turnbuckle or a positional supportive brace as directed by the prescribing physician. Practitioners have the flexibility to prescribe shorter or longer term wearing times and treatment protocols. All programs should be monitored for progress by the supervising practitioner and managed accordingly.

NOTE: The following protocol has been utilized with successful clinical outcomes. However, the wearing schedule, which includes duration and frequency of use, is to be ultimately determined by the prescribing physician or supervising practitioner. Should your prescribing physician or therapist recommend a different protocol, please follow his or her instructions.

STEP 1: Rotate the therapy knob until you feel a gentle, pain-free stretch.

DESIRED STRETCH INTENSITY								
0	1 (2	3 4	5	6	7	8	9	10
NO STRETCH PAINFUL STRETCH								

- **STEP 2:** Hold the stretch intensity for 5 minutes. Before turning the knob, reassess stretch level:
 - 1. If stretch intensity has decreased, rotate the knob until you feel a 2-3 level stretch again.
 - 2. If stretch intensity has **not** changed, **leave in the same position.**
 - 3. If stretch intensity has increased, rotate the knob in the opposite direction until you feel a 2-3 level stretch intensity.
- **STEP 3:** Hold the stretch position for another 5 minutes. Repeat steps 2 and 3 for a series of six 5-minute stretches (30-minute Therapy Session).

IMPORTANT: If you initiate JAS therapy early post-surgery, you may need to begin with shorter therapy sessions (one to three 5-minute stretches per session) due to post-operative symptoms of swelling, pain, and sensitivity to passive stretch. Gradually increase to 30-minute sessions over a two week period, as tolerated.

STEP 4: When the 30-minute session is complete, turn the knob in the opposite direction until the stretch is relieved, then remove the device. You may feel some joint stiffness following your JAS session. Gently move your joint back and forth to "cool down" and relieve the stiffness.

IMPORTANT: Evaluate your stretch sensation every 5 minutes **before** adjusting the Range of Motion (ROM) on your JAS device. If stretch intensity has not decreased, leave in the same position. Aggressive or painful levels of stretch will not achieve the desired result of permanent tissue lengthening and will yield counterproductive results – increased stiffness, swelling or pain, and little or no gains in joint ROM.

NUMBER OF SESSIONS PER DAY: Three 30-minute sessions, per direction, per day, are suggested for optimal results. Begin with one 30-minute session per day and add sessions every 3-5 days as tolerated, up to 3 sessions per direction per day.

WARNING: JAS EZ devices are NOT designed to be worn overnight. Joint Active Systems does not recommend or endorse a therapy protocol that includes extended wear times of 4+ hour sessions as are commonly recommended with dynamic and some turnbuckle splints due to the known increased risk of skin irritation and breakdown. Wait 45-60 minutes between each JAS treatment session. If you experience a change in swelling or irritation to your underlying condition when using the JAS device, discontinue use and contact your physician.

TECHNICAL SUPPORT: Call JAS toll-free between the hours of 8:00 AM - 5:00 PM CST at **(800) 879-0117** for technical assistance or questions regarding your JAS device.
